

# BAUWERK COLOUR®

## CONCRETE SEALER

**A natural olive based product for sealing and maintaining absorbent surfaces, made from the hulls of black olives.**

This product is used to saturate and seal stone or concrete, and to provide a great natural finish.

### Uses

Especially suited to polished concrete, raw concrete, marble, terracotta and natural stone, this is a wonderful natural sealer which can also be used as a soap to clean and maintain your surfaces. This product is only suitable for application onto absorbent surfaces.

### Application Guide

- Dilute thoroughly one part Concrete Sealer with up to four parts of warm water.
- Apply with a sponge, clean cloth or a mop.
- Spread mixture liberally, allowing the surface to absorb the sealer.
- Leave surface to dry then repeat the process two or three times or until the surface is saturated.

**Available in 1 litre and 5 litre**

### Spread Rate Guide

10-15 sqm per litre.

This can vary depending on the absorbency and thickness of the substrate to which it is applied.

### Cleaning and Maintenance

Mix a small amount of Bauwerk Concrete Sealer in with a bucket of warm water.

Mop or wipe surface as usual.

### Hints

If the floor starts to look soapy or the Concrete Sealer is not soaking in, then the product is being over applied. In this case remove any excess with a cloth, and repeat the application process if needed after a few hours this time without overworking it.

**This is a vegan product.  
100% non-toxic and biodegradable.**
